

## Thin White Wheel for TT DC Gearbox Motors – 65mm Diameter

PRODUCT ID: 3763

We're keepin' it *wheel* with this one! Plastic gear-box motors (also known as 'TT' motors) are an easy and low cost way to get your projects moving. But we've noticed that there are not a lot of nice TT motor *wheels* to go along with them.

This Thin White Wheel has solid heft, but it won't make your robot bulky. Despite looking *a lot* like our continuous rotation servo wheel, this wheel is only for use with 'TT' gearbox DC motors!

Each order comes with one wheel. If you're looking for something narrower, take a look at our Skinny Wheel we also have a chunky orange wheel.

Wheel body: 65 x 18mm / 2.6 x 0.7"

Product Weight: 31.5g / 1.1oz
